

## **F.A.Q's**

**Q: When I shoot it, the barrel latch becomes stuck. What causes this?**

**A: The breech face may have been cut too small. Make sure the breech face has no wiggle room.**

**Q: Can this handle higher pressure .22 ammo?**

**A: From the testing that has been done, there are no issues with higher pressure ammo.**

**Q: Is the metal inside the grip necessary?**

**A: Legally, yes.**

**Q: What spring tension is needed to consistently ignite the primer?**

**A: Buy a longer spring than is needed, and cut loops off until it works consistently. (.22 nail driving blanks are a cheap way to test this.)**
